

The session with **Collin** was incredibly insightful and beneficial, particularly for students looking to improve their GitHub and version control skills. We walked through key concepts like Git branching, collaborative workflows, and using pull requests to streamline code contributions, all of which are essential skills in modern software development.

For me personally, it was a great opportunity to learn best practices in managing repositories, which I know will be invaluable for my current and future projects. Additionally, the collaborative aspect of the session gave me practical experience working in a team environment, simulating the dynamics of real-world software development.

In general, I think the session was useful for all students, as it gave us not only technical skills but also a clearer understanding of how version control fits into a professional development pipeline. It provided a solid foundation for anyone wanting to work on collaborative coding projects or pursue a career in software development.
